From what I understand, a'scala.util' class means that the method or constructor is available in Scala but not available in Java. This is what the Apache Maven POM file says about scala.util: org.scala-lang scala-library 2.8.0 provided My question is: are there any objects in the standard Java classes that are not in the standard Scala library? Are there any objects in the standard Scala library that are not in the standard Java library? I have been using but it doesn't distinguish between scala.util and java.util. How can I find out if a method or constructor is available in the standard Scala or standard Java library? A: As per the scaladoc for the java.util.FileSystem, the only difference is that it exists in the Java, not the Scala, domain: package java.io; import java.io.File;
public interface FileSystem { String getSeparator(); boolean getBoolean(String name, boolean defaultValue); byte[]
getBytes(String name, byte defaultValue);
